

Duct humidity transmitter high with display 0-10 V

Article number: 803710 3023

Our channel humidity transmitter High with 0-10 V voltage output and display offers a robust plastic housing with quick-release screws. The device reliably measures humidity and optionally temperature, with four switchable temperature measuring ranges available. The relative humidity is precisely recorded by a digital humidity sensor housed in a durable plastic sintered filter. The two-line display shows either the humidity or the temperature in large format. The transmitter can be calibrated and enables fine adjustment for maximum accuracy. Installation is simple and is carried out directly in the ventilation duct using the mounting flange included in the scope of delivery.

Supply and output		
Output 0 - 10 V		
Power consumption < 1,1 VA / 24 V DC; < 2,2 VA / 24 V AC		
Voltage supply	24 V AC (± 20 %) 15 - 36 V DC	
Connection type See connection diagrams		

General information			
Load resistance RI > 5 kOhm			
Sensors Digital humidity sensor, optionally with integrated temp sensor			
Process connection	by means of plastic mounting flange and mounting brackets		

Humidity				
Measuring element humidity Digital humidity sensor (low hysteresis, high long				
Measuring range humidity	0 % RH to 100 % RH			
Output humidity	0-10 V			
Accuracy humidity	± 2.0 % (20 % RH to 80 % RH) at +25 °C, otherwise ± 3.0 %			
Long-term stability	± 1 % / year			

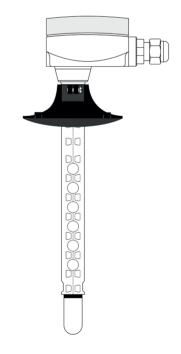

Temperature				
Measuring element Temperature	Pt1000, DIN EN 60751, Class B			
Measuring range temperature	Factory configuration: 0 °C to 50 °C multi-range switching with 4 switchable measuring ranges			
Output temperature	0 - 10 V			
Accuracy temperature	typically ± 0.2 K at +25 °C			

Ambient conditions			
Storage temperature -35 °C to +85 °C			
Operating temperature	-30 °C to +70 °C		
Permissible air humidity	< 95 % RH, non-condensing air		

Certifications / Standards		
Protection class	III (according to EN 60 730)	
Protection type	IP 65 according to EN 60 529	
Standards	CE conformity electromagnetic compatibility according to EN 61326 according to EMC Directive 2014/ 30/ EU	

Configurable options

M - Measured variable

MW / KC / 05.09.2024

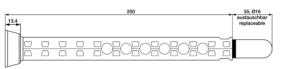

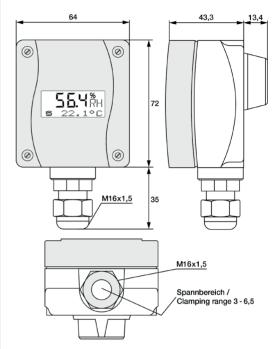

Housing			
Material	Plastic, UV-resistant Material polyamide, 30 % glass bead reinforced		
Dimensions (L/W/H) (mm)	Aluminum die casting		
Color	Traffic white (similar to RAL9016)		
Screw connection	Cable gland, Plastic, M16x1,5, Strain relief, replaceable, max. 10,4 mm Ø Inner		
Electrical connection	0.14 - 1.5 mm ² , via screw terminals on circuit board		
Closure	with quick release screws		
Display			
Cut-out (B/H) (mm)	ca. 36 x 15		

Two lines, lighted

For display of actual temperature and self-diagnostics (overrange, underrange, probe break, probe short-circuit)

Probe shaft		Sensor protection (Included in delivery)	
		Plastic sintered filter	replaceable
Material	Polyamide	Material	Plastic
Ø (mm)	20	Ø (mm)	16
Length (mm)	55	Length (mm)	32

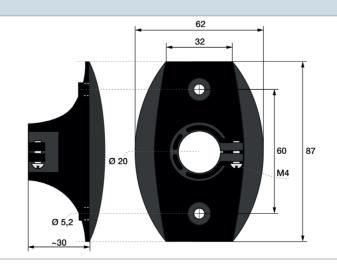

Your order code			
Article number Measured variable code Measured variable		Measured variable	
000740 0000		M1	% RH (Relative humidity)
803710 3023		M2	°C + % RH (Temperature and relative humidity)

Delivery and Packing	
Delivery	Transmitter, Plastic flange MF-20-K, Operating instructions
Packing	individually packed in cardboard box

Plastic flange MF-20-K (Included in delivery)

Material	Plastic	
Mounting	2 x Ø 5,2 mm drill holes	
Hole (mm)	Ø 20

Important assembly instructions

Installation using the mounting flange (included in the scope of delivery): Please ensure that the \varnothing of the mounting flange matches the \varnothing of the protection sleeve.

To minimize measurement errors due to heat dissipation, place the probe shaft in the middle of the duct and make sure that the probe can be easily removed if necessary.

The device should only be used in pollutant-free, non-condensing air (< 95 % RH). The sintered filter protects the humidity sensor in outdoor and duct probes from dust, which can falsify the measurement result. Maintenance in the event of contamination is therefore important. Avoid touching the humidity element to prevent incorrect measurements.

When connecting several probes to a common 24 V AC power supply, pay attention to the polarity to avoid short circuits. Please note that the voltage outputs are short-circuit-proof, but an overvoltage or the application of the power supply to the voltage output can destroy the device.

Circuit diagrams and assignment (Please also read the operating instructions before connecting the transmitter)					
Default configuration	Set scaling via DIP switch	Wiring diagram	Assignment % RH		
Werkseinstellungen: Skalierung: 0 50 °C	Messbereichsumschaltung via DIP-Schalter		1 = +UB 24V DC
