

Thermocouple type K G3/8 " with glass fibre cable

Order nr.: 803180 3211

Screw-in thermocouples with glass fibre cables are shielded and measure the temperature in pipelines or vessels up to +400 °C. They are crimped and also have a poorer seal than other cables due to the insulation material used. To configure your screw-in thermocouple for your measurement task, simply select the required configuration features and send us the order code.

General Information			Customizable options C - Mounting length
Measuring range	-40 °C to +400 °C		E - Material connection cable
Perm. °C range cable	-50 °C to +400 °C		F - Length connection cable G - Connector
Accuracy	-40 °C to +375 °C: ±1,5 °C 375 °C to 1.000 °C: ±0,004 t according to DIN IEC 60584 Class 1		H - Bend protection
Response time	t63 / t99: information is available on request		
Pull-out force	≥ 30 N		
Supply and output			
Measuring element	Thermocouple Type K		
Measuring point	Measuring point isolated		
Measurement signal	Thermovoltage		
Ambient conditions			
Protection class	IP20 according DIN 60529 (depending on cable)		
Humidity and moisture condensation resistance	according to application-specific qualification		
Certificates and Standar	rds		
Standards	DIN EN 61326-1:2013 DIN EN IEC 63000:2019-05	- N	
Directive	RoHS 2011/65/EU 2014/30/EU	- A	
Certificates	Certificate of suitability (on request)	- /\

Delivery and Assembly	
Delivery and Packaging	Probe, seperatly packaged in PE bag
Assembly instructions	per process connection
Important assembly advices	
	Measurement errors can occur due to heat dissipation to the environment. To keep these as small as possible, we recommend immersing the protection sleeve of your temperature probe as deeply as possible in the medium to be measured during installation. The optimum installation depth should be 10-15 times the Ø of the protection sleeve or, when using an immersion sleeve, the Ø of the immersion sleeve. When installing in pipelines whose Ø does not have a sufficiently deep installation depth, you should install the probe either at an angle or in a pipe elbow. Make sure that there is sufficient installation depth 2) Installation at an angle with small pipe Ø 3) Not like this: Minimum installation depth not reached

RL / KS / 28.10.2021

Installation by using an immersion sleeve (4): Please ensure that the Ø and length of the immersion sleeve are selected to suit the installation situation so that the minimum immersion depth can be achieved. Please also pay attention to the correct process connection. Since the probe is

not inserted directly into the medium, but via the immersion sleeve, the response times are somewhat slower. The probe should be selected in such a way that the protection sleeve touches the bottom of the immersion sleeve and that the air cushion around the protection sleeve is as small as possible. The use of thermal paste can improve the response times.

Please lay the cable in such a way that no water can penetrate the probe and with reserve loop (4). This allows you to extend the probe without disconnecting the electrical connection.
